SD Definition of Palliative Care	<p><i>Palliative care is medical care for people living with a serious illness. This type of care is focused on providing relief from the symptoms and stress of illness with the goal of improving quality of life for both the patient and family. Effective palliative care is delivered by a trained team of doctors, nurses, social workers, chaplains, and other health professionals who collaborate to provide an extra layer of support. Based on the needs of the patient, not on prognosis, palliative care is appropriate at any age and any stage of serious illness and may be provided alongside curative treatments in primary and specialty settings.</i></p>
