

# TRANSITIONS OF CARE REPORT

August 2023

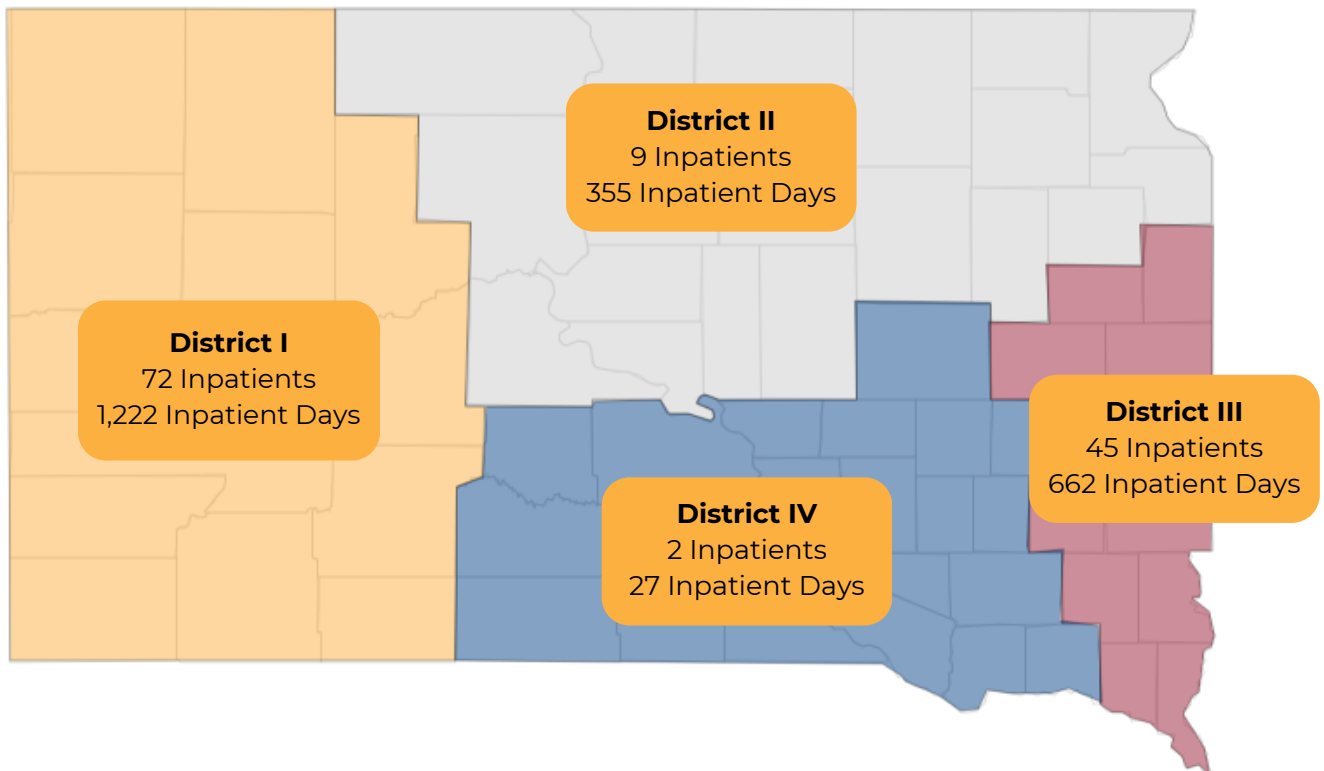

---

The South Dakota Association of Healthcare Organizations (SDAHO) has been hearing from members about the challenges they face in placing patients in post-acute care beds across the state. SDAHO staff have worked with peers in other states, primarily Nebraska and Minnesota, to develop a survey to collect data measuring the impact this is having across South Dakota. A total of 44 hospitals participated in the August survey, with 12 stating they had at least one patient who had been ready to discharge for seven days or longer but was still awaiting discharge. Delays in placing patients impact both the patients and the provider community, creating financial hardships and impacting quality of life. The goal of producing this survey is to help show policy makers, government leaders, and the public the impact this is having on hospitals, post-acute care providers, and patients across South Dakota. If you have any questions about the survey report, please contact Jacob Parsons, SDAHO’s Director of Fiscal Policy.

## Patients Awaiting Discharge > 7 Days in SD Hospitals

## SDAHO Throughput Survey Report: Patients Awaiting Discharge to Post-Acute Settings by SDAHO District based on Responses to SDAHO’s Throughput Survey

## Patients Awaiting Discharge to Post-Acute Setting > 7 Days by Facility Type

## Notable Comments on August Throughput Survey

”

Our patient is on a waitlist to transfer because there are no available beds.

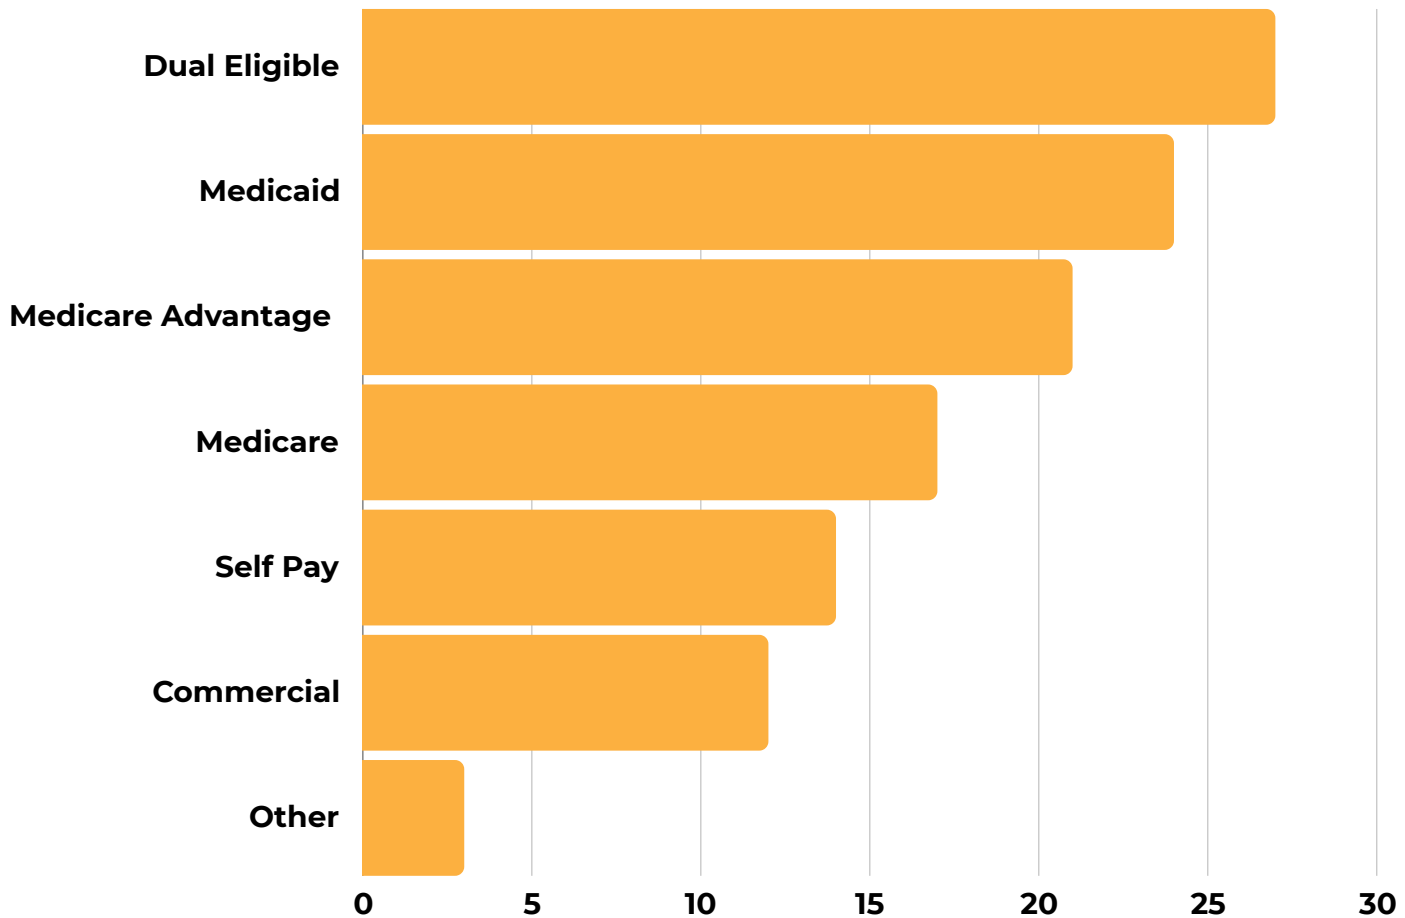

We have had issues with placing Medicaid only coverage needing long term care or assisted living placement.

Challenging connecting with families to provide information for applications for placement. There are times when they are resistant to provide the information.

”

Healthcare system has to absorb the costs to care for these patients.

## Patients Awaiting Discharge to Post-Acute Setting > 7 by Payer Type

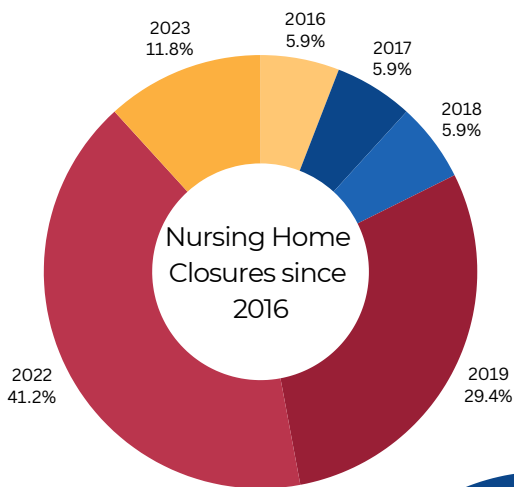

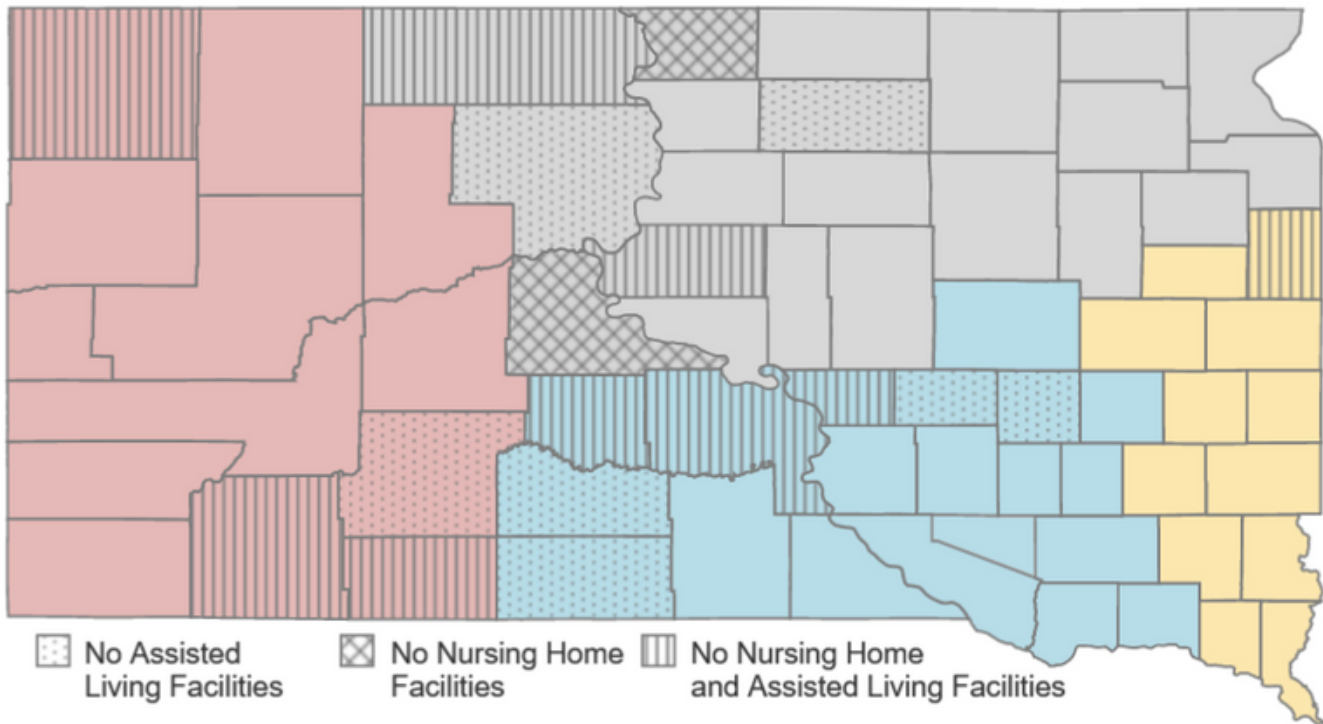

## Patients Awaiting Discharge Requiring Specialized Care

- Behavioral health needs for adolescents
- Behavioral health needs for adults
- Alcohol/substance use disorder
- Bariatric needs
- Dementia care needs
- Geriatric psych
- Tracheostomy care needs
- Peg tube care needs
- Dialysis care needs
- Ventilator needs

**On average it costs a hospital \$1,000 per day to care for these patients. The estimated impact at the time of the survey was \$2.26M.**

## South Dakota's Long-Term Care and Assisted Living Facility Status

Since 2016, 17 nursing home facilities have closed in South Dakota. These facilities provide critical services and support for South Dakota patients. Working towards providing a smooth transition across the care continuum is critical.
