

Microsoft Cybersecurity Program for Rural Hospitals

Microsoft has helped over 25% of rural hospitals in the U.S. protect against growing cybersecurity threats.

385+

CAHs and REHs have saved 60-75% on common Microsoft products.

1,000

Front-line staff have accessed free training to become more cyber savvy.

100+

Rural hospitals have adopted no/low cost AI tools to support their unique needs.

Microsoft, the American Hospital Association and the National Rural Health Association are working in partnership to combat cybercriminals targeting rural hospitals.

Register here to participate in the program.

Microsoft is committed to supporting all rural hospitals in the US with the following:

Affordable Access

- **Nonprofit pricing for independent CAHs and REHs** on business and security products (up to 75% discount).
- **New licenses of Microsoft 365 E5 Security** at no cost for one year for other hospitals.
- A one-year **Windows 10 Support Extension**.

Cybersecurity Capacity

- **Free cybersecurity assessments** by our trusted program partners to evaluate cybersecurity risks to better protect the hospital.
- **Free, curated cybersecurity training** for frontline staff and foundational cyber certifications for IT staff.

Innovation

- **Collaboration** with a rural health leaders to bring low-cost AI innovation to market:
 - **AI tool** to surface recommendations that help billing staff more quickly resolve denied insurance claims.
 - **AI tool** to help optimize outbound referrals and patient care.

Join our new webinar series for rural health professionals to enhance cybersecurity and AI knowledge. Get practical guidance on cyber attack prevention, preparation and response. Discover how to use Microsoft products to boost your organization's cyber resiliency.
